# INTRODUCTION

## 1.1 Document Brief

### 1.1.1 Revision History

- v0.2.(20120310001559) - Revision incremented at 01:41, 5 May 2010 (UTC)

### 1.1.2 Document Purpose

This document is intended as an up to date reference manual for the Gemini AstroData Type library defined within the ADCONFIG\_Gemini configuration package. Where possible the document is created by inspecting the configuration package itself, i.e. to create correct graphs for type trees. This document records the current state of the configuration. For more information on altering it or making your own configuration, see the “AstroData Package Manual”, available at [http://ophiuchus.hi.gemini.edu/ADDOCS/\\_latex\\_build/astrodatadocumentation.pdf](http://ophiuchus.hi.gemini.edu/ADDOCS/_latex_build/astrodatadocumentation.pdf) (**internal to Gemini, external link not yet available**).

### 1.1.3 Intended Audience

This reference is intended for all users of the Gemini AstroData Package, as well as developers maintaining or augmenting type information.

## 1.2 Overview

In order to configure astrodata with the Gemini data types and descriptors, the astrodata package must be able to find the ADCONFIG package in which they are defined. The ADCONFIG packages must be within a subdirectory called “ADCONFIG\_<whatever>”, the Gemini package is “ADCONFIG\_Gemini”. The astrodata package will search the PYTHONPATH for these packages. While they do contain python code, they are not meant to be directly imported, and PYTHONPATH is used to make installation simpler. One can also set ADCONFIGPATH. Note: the PATH environment variable point to the parent directory, which contains the “**ADCONFIG\_...**” subdirectory.

# GEMINI TYPE GRAPHS

Gemini dataset types, or “AstroData Types” include three distinct trees.

- The GEMINI tree which relates to instruments and instrument-modes.
- The RAW tree which is single descendant, and represents processing status. These types are presented mixed with the “typological” types through the `getTypes` interface, but can also be retrieved through the `getStatus` call.
- A generic type tree which relates to the GEMINI tree (i.e. IMAGE is any of the specific INSTR\_IMAGE types).

The graphs below are derived from the ADCONFIG\_Gemini AstroData Configuration Package as of March 09, 2012, and show descriptor and primitive set assignments when present.

## 2.1 GENERIC

The GENERIC type tree relates to abstract data modes which may be used to apply recipes generic to these modes. If generic primitives can be written, these too can be shared, but it is also possible to assign the primitives at instrument-mode specific granularity as well. That is, one can provide generic code at the levels where it makes sense, and type-specific code when that makes more sense or is expedient. We generally visualize an incremental development process where new instrument-modes are first supported in type-specific code where changes to the system are isolated and don’t affect other processing. Subsequently this code can be integrated into, or merely replaced by, more general algorithms that use other AstroData features to abstract away incidental differences between datasets from different devices.

Figure 2.1: The Gemini GENERIC Type Tree

## 2.2 GEMINI

The complete tree of instrument-mode related typological classifications all descend from the GEMINI type, which means of course, the data was from a GEMINI telescope. The figure is difficult to read as all types are present, and will get more so as the instrument trees are filled out. The instrument related graphs are more informative, but this gives an idea of the overall taxonomy.

Figure 2.2: The Gemini GEMINI Type Tree

## 2.3 GMOS

GMOS is an optical instrument with an imaging mode, an IFU, and a multi-object spectrograph. We have a complete first revision of the GMOS tree.

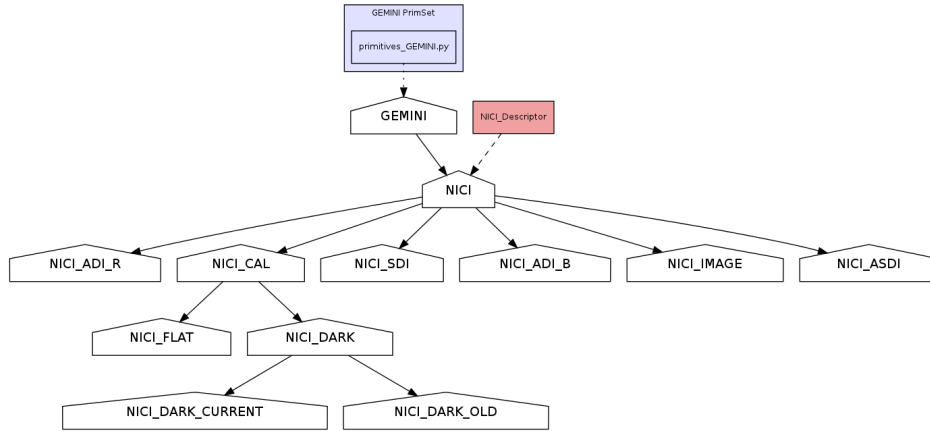

Figure 2.5: The Gemini NICI Type Tree

## 2.6 NIFS

NIFS is a Near-Infrared Integral Field Spectrometer uses at Gemini North. We have a minimal tree in place for NIFS, which recognizes IMAGE and SPECT types.

Figure 2.6: The Gemini NIFS Type Tree

## 2.7 NIRI

NIRI is a Near-Infrared Imager in use at Gemini North. We have a minimal tree in place for NIRI, which recognizes IMAGE and SPECT types.

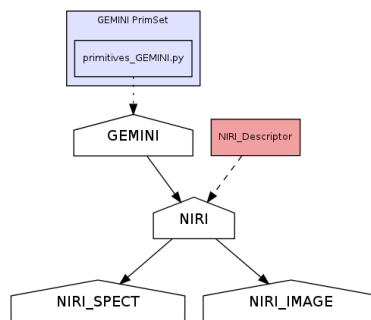

Figure 2.7: The Gemini NIRI Type Tree

## 2.8 MICHELLE

MICHELLE is a mid-infrared image and sepcrometer. We have a minimal tree in place for MICHELLE, which recognizes IMAGE and SPECT types.

Figure 2.8: The Gemini MICHELLE Type Tree

## 2.9 RAW

The RAW tree contains inherent sequencing, what are show as children are new forms of the data... that is, some transformation(s) will make the data recognized only as the child. These types can be used to check the state of processing, and can have entirely generic recipes associated, as may be needed by some pipelines.

Figure 2.9: The Gemini RAW Type Tree

## 2.10 TRECS

TRECS is a Thermal-Region Camera Spectograph, a mid-infrared imager and long-slit spectrograph built for Gemini South. We have a minimal tree in place for TRECS, which recognizes IMAGE and SPECT.

# GEMINI TYPE SOURCE REFERENCE

## 3.1 ACQUISITION Classification Source

**Classification** ACQUISITION

**Source Location** ADCONFIG\_Gemini/classifications/types/gemdtype.ACQUISITION.py

```
1 class ACQUISITION(DataClassification):
2     name="ACQUISITION"
3     usage = """
4         Applies to all Gemini acquisitions
5         """
6     parent = "GENERIC"
7     requirement = OR([ PHU(OBSCLASS="acq"),
8                       PHU(OBSCLASS="acqCal") ])
9
10 newtypes.append(ACQUISITION())
```

## 3.2 BIAS Classification Source

**Classification** BIAS

**Source Location** ADCONFIG\_Gemini/classifications/types/generic/gemdtype.BIAS.py

```
1 class BIAS(DataClassification):
2     name="BIAS"
3     # this a description of the intent of the classification
4     # to what does the classification apply?
5     usage = '''
6         Applies to any Gemini dataset which is an instrument bias calibration.'''
7     parent = "CAL"
8     requirement = ISCLASS("GMOS_BIAS")
9
10 newtypes.append( BIAS())
```

## 3.3 CAL Classification Source

**Classification** CAL

**Source Location** ADCONFIG\_Gemini/classifications/types/gemdtype.CAL.py

```
1 class CAL(DataClassification):
2     name="CAL"
3     # this a description of the intent of the classification
4     # to what does the classification apply?
5     usage = """
6         Special parent to group generic types (e.g. IMAGE, SPECT, MOS, IFU)
7         """
8     parent = "GENERIC"
9     requirement = OR([ ISCLASS("F2_CAL"),
10                       ISCLASS("GMOS_CAL"),
11                       ISCLASS("NICI_CAL") ])
12
13 newtypes.append(CAL())
```

## 3.4 DARK Classification Source

### Classification DARK

**Source Location** ADCONFIG\_Gemini/classifications/types/generic/gemdtype.DARK.py

```
1 class DARK(DataClassification):
2     name="DARK"
3     # this a description of the intent of the classification
4     # to what does the classification apply?
5     usage = '''
6         Applies to any dataset that is a Gemini dark current calibration.
7         '''
8     parent = "CAL"
9     requirement = OR(ISCLASS("NICI_DARK"),
10                     ISCLASS("GMOS_DARK"))
11
12 newtypes.append( DARK())
```

## 3.5 F2 Classification Source

### Classification F2

**Source Location** ADCONFIG\_Gemini/classifications/types/F2/gemdtype.F2.py

```
1 class F2(DataClassification):
2     name="F2"
3     usage = """
4         Applies to all datasets from the FLAMINGOS-2 instrument
5         """
6     parent = "GEMINI"
7     # Commissioning data from 28 August 2009 to 20 February 2010 use "Flam" as
8     # the value for the INSTRUME keyword. The final value for the INSTRUME
9     # keyword will be "F2".
10    requirement = OR([ PHU(INSTRUME="Flam"),
11                      PHU(INSTRUME="F2") ])
12
13 newtypes.append(F2())
```

## 3.6 F2\_CAL Classification Source

**Classification** F2\_CAL

**Source Location** ADCONFIG\_Gemini/classifications/types/F2/gemdtype.F2\_CAL.py

```

1  class F2_CAL(DataClassification):
2      name="F2_CAL"
3      usage = """
4          Applies to all calibration datasets from the FLAMINGOS-2 instrument
5          """
6      parent = "F2"
7      requirement = ISCLASS("F2") & OR([ ISCLASS("F2_IMAGE_FLAT"),
8                                         ISCLASS("F2_IMAGE_TWILIGHT"),
9                                         ISCLASS("F2_DARK"),
10                                        ISCLASS("F2_LS_FLAT"),
11                                        ISCLASS("F2_LS_TWILIGHT"),
12                                        ISCLASS("F2_LS_ARC"),
13                                        ISCLASS("F2_MOS_FLAT"),
14                                        ISCLASS("F2_MOS_TWILIGHT"),
15                                        ISCLASS("F2_MOS_ARC") ])
16
17  newtypes.append(F2_CAL())

```

## 3.7 F2\_DARK Classification Source

**Classification** F2\_DARK

**Source Location** ADCONFIG\_Gemini/classifications/types/F2/gemdtype.F2\_DARK.py

```

1  class F2_DARK(DataClassification):
2      name="F2_DARK"
3      usage = """
4          Applies to all dark datasets from the FLAMINGOS-2 instrument
5          """
6      parent = "F2_IMAGE"
7      requirement = AND([ ISCLASS("F2_IMAGE"),
8                          PHU(OBSTYPE="DARK") ])
9
10  newtypes.append(F2_DARK())

```

## 3.8 F2\_IMAGE Classification Source

**Classification** F2\_IMAGE

**Source Location** ADCONFIG\_Gemini/classifications/types/F2/gemdtype.F2\_IMAGE.py

```

1  class F2_IMAGE(DataClassification):
2      name="F2_IMAGE"
3      usage = """
4          Applies to all imaging datasets from the FLAMINGOS-2 instrument
5          """
6      parent = "F2"
7      # Commissioning data from 28 August 2009 to 20 February 2010 use the

```

```
8      # MASKNAME keyword to specify whether the data is imaging, longslit or
9      # mos. The final keyword to use will be DCKERPOS or MOSPOS.
10     requirement = ISCLASS("F2") & OR([ PHU(MASKNAME="imaging"),
11                                         PHU(DECKER="Open"),
12                                         PHU(MOSPOS="Open")  ])
13
14 newtypes.append(F2_IMAGE())
```

## 3.9 F2\_IMAGE\_FLAT Classification Source

**Classification** F2\_IMAGE\_FLAT

**Source Location** ADCONFIG\_Gemini/classifications/types/F2/gemdtype.F2\_IMAGE\_FLAT.py

```
1 class F2_IMAGE_FLAT(DataClassification):
2     name="F2_IMAGE_FLAT"
3     usage = """
4         Applies to all imaging flat datasets from the FLAMINGOS-2 instrument
5         """
6     parent = "F2_IMAGE"
7     requirement = AND([ ISCLASS("F2_IMAGE"),
8                         OR([ PHU(OBSTYPE="FLAT"),
9                             OR([ PHU(OBJECT="Twilight"),
10                                 PHU(OBJECT="twilight")  ])  ])  ])
11
12 newtypes.append(F2_IMAGE_FLAT())
```

## 3.10 F2\_IMAGE\_TWILIGHT Classification Source

**Classification** F2\_IMAGE\_TWILIGHT

**Source Location** ADCONFIG\_Gemini/classifications/types/F2/gemdtype.F2\_IMAGE\_TWILIGHT.py

```
1 class F2_IMAGE_TWILIGHT(DataClassification):
2     name="F2_IMAGE_TWILIGHT"
3     usage = """
4         Applies to all imaging twilight flat datasets from the FLAMINGOS-2
5         instrument
6         """
7     parent = "F2_IMAGE_FLAT"
8     requirement = AND([ ISCLASS("F2_IMAGE_FLAT"),
9                         OR([ PHU(OBJECT="Twilight"),
10                             PHU(OBJECT="twilight")  ])  ])
11
12 newtypes.append(F2_IMAGE_TWILIGHT())
```

## 3.11 F2\_LS Classification Source

**Classification** F2\_LS

**Source Location** ADCONFIG\_Gemini/classifications/types/F2/gemdtype.F2\_LS.py

```

1 class F2_LS(DataClassification):
2     name="F2_LS"
3     usage = """
4         Applies to all longslit datasets from the FLAMINGOS-2 instrument
5         """
6     parent = "F2_SPECT"
7     requirement = AND([ ISCLASS("F2_SPECT"),
8                         OR([ PHU(DECKER="Long_slit"),
9                             PHU(DCKERPOS="Long_slit"),
10                             PHU(MOSPOS="?.pix-slit") ] ) ] )
11
12 newtypes.append(F2_LS())

```

## 3.12 F2\_LS\_ARC Classification Source

**Classification** F2\_LS\_ARC

**Source Location** ADCONFIG\_Gemini/classifications/types/F2/gemdtype.F2\_LS\_ARC.py

```

1 class F2_LS_ARC(DataClassification):
2     name="F2_LS_ARC"
3     usage = """
4         Applies to all longslit arc datasets from the FLAMINGOS-2 instrument
5         """
6     parent = "F2_LS"
7     requirement = AND([ ISCLASS("F2_LS"),
8                         PHU(OBSTYPE="ARC") ] )
9
10 newtypes.append(F2_LS_ARC())

```

## 3.13 F2\_LS\_FLAT Classification Source

**Classification** F2\_LS\_FLAT

**Source Location** ADCONFIG\_Gemini/classifications/types/F2/gemdtype.F2\_LS\_FLAT.py

```

1 class F2_LS_FLAT(DataClassification):
2     name="F2_LS_FLAT"
3     usage = """
4         Applies to all longslit flat datasets from the FLAMINGOS-2 instrument
5         """
6     parent = "F2_LS"
7     requirement = AND([ ISCLASS("F2_LS"),
8                         PHU(OBSTYPE="FLAT"),
9                         NOT(ISCLASS("F2_LS_TWILIGHT")) ] )
10
11 newtypes.append(F2_LS_FLAT())

```

## 3.14 F2\_LS\_TWILIGHT Classification Source

**Classification** F2\_LS\_TWILIGHT

**Source Location** ADCONFIG\_Gemini/classifications/types/F2/gemdtype.F2\_LS\_TWILIGHT.py

```
1 class F2_LS_TWILIGHT(DataClassification):
2     name="F2_LS_TWILIGHT"
3     usage = """
4         Applies to all longslit twilight flat datasets from the FLAMINGOS-2
5         instrument
6         """
7     parent = "F2_LS"
8     requirement = AND([ ISCLASS("F2_LS"),
9                         PHU(OBSTYPE="FLAT"),
10                        PHU(OBJECT="Twilight") ])
11
12 newtypes.append(F2_LS_TWILIGHT())
```

## 3.15 F2\_MOS Classification Source

**Classification** F2\_MOS

## 3.81 NIFS\_RONCHI Classification Source

**Classification** NIFS\_RONCHI

**Source Location** ADCONFIG\_Gemini/classifications/types/NIFS/gemdtype.NIFS\_RONCHI.py

```

1 class NIFS_RONCHI(DataClassification):
2     name="NIFS_RONCHI"
3     usage = "Applies to NIFS Ronchi mask calibration observations"
4     parent = "NIFS"
5     requirement = AND(ISCLASS('NIFS'), PHU(OBSTYPE='FLAT'), PHU(APERTURE='Ronchi_Screen_G5615'))
6
7 newtypes.append(NIFS_RONCHI())

```

## 3.82 NIFS\_SPECT Classification Source

**Classification** NIFS\_SPECT

**Source Location** ADCONFIG\_Gemini/classifications/types/NIFS/gemdtype.NIFS\_SPECT.py

```
1 class NIFS_SPECT(DataClassification):
2     name="NIFS_SPECT"
3     usage = "Applies to any spectroscopy dataset from the NIFS instrument."
4     parent = "NIFS"
5
6     requirement = ISCLASS("NIFS") & PHU( FLIP='Out')
7
8 newtypes.append(NIFS_SPECT())
```

## 3.83 NIRI Classification Source

**Classification** NIRI

**Source Location** ADCONFIG\_Gemini/classifications/types/NIRI/gemdtype.NIRI.py

```
1 class NIRI(DataClassification):
2     name="NIRI"
3     usage = "Applies to any data from the NIRI instrument."
4     parent = "GEMINI"
5
6     requirement = PHU(INSTRUME='NIRI')
7
8 newtypes.append(NIRI())
```

## 3.84 NIRI\_IMAGE Classification Source

**Classification** NIRI\_IMAGE

**Source Location** ADCONFIG\_Gemini/classifications/types/NIRI/gemdtype.NIRI\_IMAGE.py

```
1 class NIRI_IMAGE(DataClassification):
2     name="NIRI_IMAGE"
3     usage = "Applies to any IMAGE dataset from the NIRI instrument."
4     parent = "NIRI"
5     requirement = ISCLASS('NIRI') & PHU({"{prohibit}FILTER3": "(.*)grism(.*)"})
6
7
8 newtypes.append(NIRI_IMAGE())
```

## 3.85 NIRI\_SPECT Classification Source

**Classification** NIRI\_SPECT

**Source Location** ADCONFIG\_Gemini/classifications/types/NIRI/gemdtype.NIRI\_SPECT.py

```

1  class NIRI_SPECT(DataClassification):
2      name="NIRI_SPECT"
3      usage = "Applies to any spectra from the NIRI instrument."
4      parent = "NIRI"
5      requirement = ISCLASS('NIRI') & PHU(FILTER3='(.*?)grism(.*?)')
6
7  newtypes.append(NIRI_SPECT())

```

## 3.86 NODCHOP Classification Source

**Classification** NODCHOP

**Source Location** ADCONFIG\_Gemini/classifications/types/gemdtype.NODCHOP.py

```

1  class NODCHOP(DataClassification):
2      name="NODCHOP"
3      # this a description of the intent of the classification
4      # to what does the classification apply?
5      usage = '''
6          Applies to data marked with NOD and CHOP keywords.
7          TEST TYPE!!!
8          Made to test Structures Feature.
9          '''
10     requirement = PHU(DATATYPE="marked-nodandchop")
11
12  newtypes.append( NODCHOP() )

```

## 3.87 OSCIR Classification Source

**Classification** OSCIR

**Source Location** ADCONFIG\_Gemini/classifications/types/OSCIR/gemdtype.OSCIR.py

```

1  class OSCIR(DataClassification):
2      name="OSCIR"
3      usage = "Applies to datasets from the OSCIR instrument"
4      parent = "GEMINI"
5      requirement = OR(PHU(INSTRUME='oscir'), PHU(INSTRUME='OSCIR'))
6
7  newtypes.append(OSCIR())

```

## 3.88 PHOENIX Classification Source

**Classification** PHOENIX

**Source Location** ADCONFIG\_Gemini/classifications/types/PHOENIX/gemdtype.PHOENIX.py

```

1  class PHOENIX(DataClassification):
2      name="PHOENIX"
3      usage = ""
4      requirement = PHU(INSTRUME='PHOENIX')
5
6  newtypes.append(PHOENIX())

```

## 3.89 PREPARED Classification Source

**Classification** PREPARED

**Source Location** ADCONFIG\_Gemini/classifications/status/gemdtype.PREPARED.py

```
1 class PREPARED(DataClassification):
2
3     name="PREPARED"
4     usage = 'Applies to all "prepared" data.'
5     parent = "UNPREPARED"
6     requirement = PHU( {'{re}.*?PREPARE': ".*?" })
7
8 newtypes.append(PREPARED())
```

## 3.90 PROCESSED\_ARC Classification Source

**Classification** PROCESSED\_ARC

**Source Location** ADCONFIG\_Gemini/classifications/status/gemdtype.PROCESSED\_ARC.py

```
1 class PROCESSED_ARC(DataClassification):
2
3     name="PROCESSED_ARC"
4     usage = 'Applies to all data processed by storeProcessedArc.'
5     parent = "UNPREPARED"
6     requirement = PHU( {'{re}.*?PROCARC': ".*?" })
7
8 newtypes.append(PROCESSED_ARC())
```

## 3.91 PROCESSED\_BIAS Classification Source

**Classification** PROCESSED\_BIAS

**Source Location** ADCONFIG\_Gemini/classifications/status/gemdtype.PROCESSED\_BIAS.py

```
1 class PROCESSED_BIAS(DataClassification):
2
3     name="PROCESSED_BIAS"
4     usage = 'Applies to all "gbias"ed data.'
5     parent = "UNPREPARED"
6     requirement = OR([PHU( {'{re}.*?GBIAS': ".*?" }),
7                          PHU( {'{re}.*?PROCBIAS': ".*?" })])
8
9 newtypes.append(PROCESSED_BIAS())
```

## 3.92 PROCESSED\_DARK Classification Source

**Classification** PROCESSED\_DARK

**Source Location** ADCONFIG\_Gemini/classifications/status/gemdtype.PROCESSED\_DARK.py

```

1 class PROCESSED_DARK(DataClassification):
2
3     name="PROCESSED_DARK"
4     usage = 'Applies to all dark data stored using storeProcessedDark.'
5     parent = "UNPREPARED"
6     requirement = PHU( {'{re}.*?PROCDDARK': ".*?" })
7
8 newtypes.append(PROCESSED_DARK())

```

### 3.93 PROCESSED\_FLAT Classification Source

**Classification** PROCESSED\_FLAT

**Source Location** ADCONFIG\_Gemini/classifications/status/gemdtype.PROCESSED\_FLAT.py

```

1 class PROCESSED_FLAT(DataClassification):
2
3     name="PROCESSED_FLAT"
4     usage = 'Applies to all "giflat"ed flat data, or data stored using storeProcessedFlat.'
5     parent = "UNPREPARED"
6     requirement = OR([PHU( {'{re}.*?GIFLAT': ".*?" }),
7                          PHU( {'{re}.*?PROCFLAT': ".*?" })])
8
9 newtypes.append(PROCESSED_FLAT())

```

### 3.94 PROCESSED\_FRINGE Classification Source

**Classification** PROCESSED\_FRINGE

**Source Location** ADCONFIG\_Gemini/classifications/status/gemdtype.PROCESSED\_FRINGE.py

```

1 class PROCESSED_FRINGE(DataClassification):
2
3     name="PROCESSED_FRINGE"
4     usage = 'Applies to all "gifringe"ed data.'
5     parent = "UNPREPARED"
6     requirement = OR([PHU( {'{re}.*?GIFFRINGE': ".*?" }),
7                          PHU( {'{re}.*?PROCFRNG': ".*?" })])
8
9 newtypes.append(PROCESSED_FRINGE())

```

### 3.95 RAW Classification Source

**Classification** RAW

**Source Location** ADCONFIG\_Gemini/classifications/status/gemdtype.RAW.py

```

1 class RAW(DataClassification):
2     editprotect=True
3     name="RAW"
4     usage = 'Applies to data that has not been modified by the gemini package in any way (looks for C'
5     requirement = PHU({'{prohibit}GEM-TLM': ".*?" })

```

```
6
7 newtypes.append(RAW())
```

## 3.96 SPECT Classification Source

**Classification** SPECT

**Source Location** ADCONFIG\_Gemini/classifications/types/gemdtype.SPECT.py

```
1 class SPECT(DataClassification):
2     name="SPECT"
3     # this a description of the intent of the classification
4     # to what does the classification apply?
5     usage = """
6         Applies to all Gemini spectroscopy datasets
7         """
8     parent = "GENERIC"
9     requirement = OR([ ISCLASS("F2_SPECT"),
10                        ISCLASS("GMOS_SPECT"),
11                        ISCLASS("GNIRS_SPECT"),
12                        ISCLASS("MICHELLE_SPECT"),
13                        ISCLASS("NIFS_SPECT"),
14                        ISCLASS("NIRI_SPECT"),
15                        ISCLASS("TRECS_SPECT") ])
16
17 newtypes.append(SPECT())
```

## 3.97 TRECS Classification Source

**Classification** TRECS

**Source Location** ADCONFIG\_Gemini/classifications/types/TRECS/gemdtype.TRECS.py

```
1 class TRECS(DataClassification):
2     name = "TRECS"
3     usage = "Applies to all datasets from the TRECS instrument"
4     parent = "GEMINI"
5     requirement = PHU(INSTRUME="TReCS")
6
7 newtypes.append(TRECS())
```

## 3.98 TRECS\_IMAGE Classification Source

**Classification** TRECS\_IMAGE

**Source Location** ADCONFIG\_Gemini/classifications/types/TRECS/gemdtype.TRECS\_IMAGE.py

```
1 class TRECS_IMAGE(DataClassification):
2     name = "TRECS_IMAGE"
3     usage = "Applies to all imaging datasets from the TRECS instrument"
4     parent = "TRECS"
5     requirement = ISCLASS("TRECS") & PHU(GRATING="(.*?)[mM]irror")
```

```

6
7 newtypes.append(TRECS_IMAGE())

```

### 3.99 TRECS\_SPECT Classification Source

**Classification** TRECS\_SPECT

**Source Location** ADCONFIG\_Gemini/classifications/types/TRECS/gemdtype.TRECS\_SPECT.py

```

1 class TRECS_SPECT(DataClassification):
2     name = "TRECS_SPECT"
3     usage = "Applies to all spectroscopic datasets from the TRECS instrument"
4     parent = "TRECS"
5     requirement = ISCLASS("TRECS") & NOT(ISCLASS("TRECS_IMAGE"))
6
7 newtypes.append(TRECS_SPECT())

```

### 3.100 UNPREPARED Classification Source

**Classification** UNPREPARED

**Source Location** ADCONFIG\_Gemini/classifications/status/gemdtype.UNPREPARED.py

```

1 class UNPREPARED(DataClassification):
2     editprotect=True
3     name="UNPREPARED"
4     usage = 'Applies to un-"prepared" datasets, datasets which have not had the prepare task run on t
5     parent = "RAW"
6     requirement= PHU({'prohibit,re'.'*?PREPARE': ".*?" })
7
8 newtypes.append(UNPREPARED())

```

The following documentation lists current Gemini types and shows their source files in raw python form. When types are defined in the same source, their section is combined. Entries are alphabetized.
